CALCULATOR

ANDROID APP

FILES INCLUDED

1. Calculator apk
2. Source Code

INTRODUCTION

The application is a simple calculator with a decent level of error handling. Made using Kotlin and Native Android.

The CE button acts as backspace. When long pressed, it resets the workspace, i.e. Acts as the AC button in most common calculators.
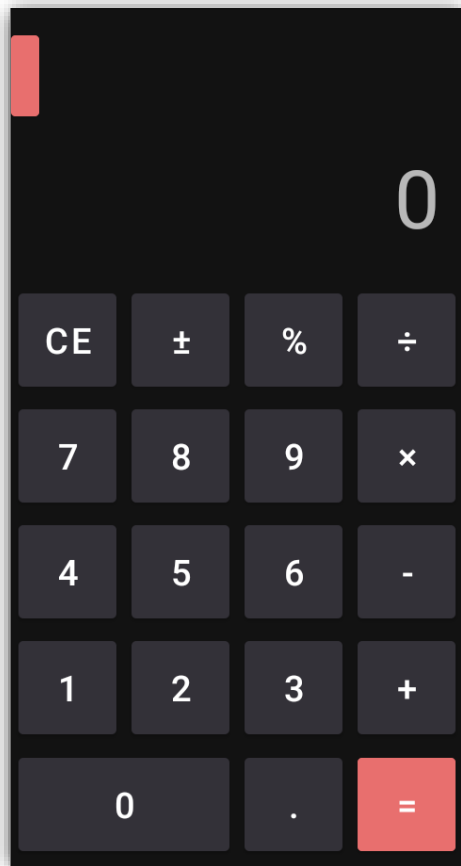

The calculator also supports Dark and Light mode as per the settings of the device.

NOTE

The calculator calculates values simultaneously as you enter the operations. So, it doesn't take BODMAS rule into account.

# SCREENSHOTS

1. Landing Screen (Dark)   (Light)

2. Calculator in action

3. Long-pressing CE key works as AC
